

Important Chromebook Information

Dear Parent,

Please note that your child's Chromebook will be used for PSAT and SAT testing during sophomore and junior year. For this reason, each Chromebook has been licensed, enrolled, and assigned to your child through our school management system. It is important that students maintain and regularly use their assigned Chromebook so that it remains properly configured and ready for testing.

We have noticed that some students may attempt to bypass the school's network and device regulations by bringing an iPad, Windows laptop, MacBook, or other personal device in place of their assigned Chromebook. Please do not allow your child to bring these devices to school as a substitute for their Chromebook. Students who bring an alternate personal device will be asked to put it away and use their school-approved Chromebook instead. We recommend leaving these devices at home.

During the school day, Chromebooks are managed to provide a safe and appropriate educational environment. School restrictions are in place to limit access to inappropriate content, including 18+ material, and certain applications, websites, personal profiles, and other features may not be available during school hours. Each Chromebook is also associated with its assigned student in our system. If a Chromebook is accidentally lost or misplaced, the device can be remotely disabled or wiped when necessary. If students accidentally exchange or confuse their Chromebooks, we can verify the assigned owner through our management system.

If your child needs to replace or change their Chromebook, please notify the school before doing so. The new device will need to be properly enrolled and configured to ensure that it continues to meet school and PSAT/SAT testing requirements.

Finally, we strongly recommend a protective case for your child's Chromebook. Over the years, we have seen cracked screens, damaged corners, and other damage caused by Chromebooks being carried unprotected in backpacks. A case can make a significant difference in keeping the device protected throughout the school year.

Thank you for your cooperation in helping us keep student devices secure, properly managed, and ready for classroom use and standardized testing.
